

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

---

Claim 1 (currently amended): A content managing system having a content managing portion comprising:

a content library for storing a plurality of content files;

a content database identifying said content file;

library managing means for managing said content library with said content database;

customer file storing means, having areas assigned to individual users, for storing content files for the individual users;

a customer file database identifying customer content files;

customer file managing means for managing said customer file storing means with said customer database;

delivery database for storing delivery information; ✓

AI delivery managing means for managing the delivery of a content file to a user terminal unit with said delivery database, wherein the content managing portion and the user terminal unit are connected through a network; and

wherein the content managing portion is operated from the user terminal unit through the network so as to manage a content file of each user.

Claim 2 (original): The content managing system as set forth in claim 1, wherein said customer file managing means manages the areas assigned to individual users such that a user area assigned to an individual user can be accessed from only the user terminal unit of the user to whom the user area has been assigned; and

wherein said customer file managing means processes a content file stored in the user area corresponding to a command received from the user terminal unit of the user to whom the user area has been assigned.

---

Claim 3 (canceled).

A2  
Claim 4 (original): The content managing system as set forth in claim 1, wherein said customer file managing means allows the used state of the user area to be displayed by the user terminal unit of the user to whom the user area has been assigned.

Claim 5 (canceled).

A3  
Claim 6 (original): The content managing system as set forth in claim 1, wherein said library managing means manages content files that are scheduled to be registered later to said library as well as content files currently stored in said library.

Claim 7 (canceled).

A4  
Claim 8 (original): The content managing system as set forth in claim 1, wherein said delivery managing means performs a process for purchasing a content file corresponding to a user's delivery request when the content file has been registered to said library, and wherein said delivery managing means performs a process for purchasing a content file on a scheduled registration date when the content file is scheduled to be registered later.

Claim 9 (original): The content managing system as set forth in claim 8, wherein the content file purchasing process is performed by copying the content file that the user wants to purchase from said library to the user area for the user.

Claim 10 (currently amended): The content managing system as set forth in claim 1, wherein an automatic delete on / off option can be designated to a content file stored in each user area, and wherein when a new content file is stored to the user area, if the storage capacity of the user area becomes insufficient, said customer file managing means deletes a content file designated with the automatic delete on option from the user area.

Claim 11 (currently amended): A content managing apparatus, comprising:  
a content library for storing a plurality of content files;  
a content database identifying said content files;  
library managing means for managing said content library with said content database;  
customer file storing means, having areas assigned to individual users, for storing content files for the individual users;  
a customer file database identifying customer files;  
customer file managing means for managing said customer file storing means including a used state of the user area with said customer file database;  
and  
delivery database for storing delivery information;  
delivery managing means for managing the delivery of a content file to a user terminal unit with said delivery database; and  
communicating means for connecting the content managing apparatus to a network, wherein the content managing apparatus can be connected to the user terminal through the network.

Claim 12 (original): The content managing apparatus as set forth in claim 11, wherein said customer file managing means manages the user area for each user so that the user area can be accessed from only the user terminal unit of the user who has been assigned to the user area, and wherein said customer file managing means processes a content file stored in the user area corresponding to a command received from the user terminal unit of the user who has been assigned to the user area.

Claim 13 (canceled).

Claim 14 (original): The content managing apparatus as set forth in claim 11, wherein said customer file managing means allows the used state of the user area to be displayed by the user terminal unit of the user to whom the user area has been assigned.

Claim 15 (canceled).

AG  
Claim 16 (original): The content managing apparatus as set forth in claim 11, wherein said library managing means manages content files that are scheduled to be registered later to said library as well as content files currently stored in said library.

Claim 17 (canceled).

Claim 18 (original): The content managing apparatus as set forth in claim 11, wherein said delivery managing means performs a process for purchasing a content file corresponding to a user's delivery request when the content file has been registered to said library; and

wherein said delivery managing means performs a process for purchasing a content file on a scheduled registration date when the content file is scheduled to be registered later.

AM  
Claim 19 (original): The content managing apparatus as set forth in claim 18, wherein the content file purchasing process is performed by copying the content file that the user wants to purchase from said library to the user area for the user.

Claim 20 (original): The content managing apparatus as set forth in claim 11, wherein an automatic delete on / off option can be designated for a content file stored in each user area; and

wherein when a new content file is stored to the user area, if the storage capacity of the user area becomes insufficient, said customer file managing means deletes a content file designated with the automatic delete on option from the user area.

Claim 21 (currently amended): A content managing method using a content managing portion having a content library for storing a plurality of content files and a content managing portion for assigning user areas to a customer file storage, the user areas storing content files for individual users, comprising the steps of:

connecting the content managing portion and a user terminal unit through a network; ~~and~~  
causing the user terminal unit to operate the content managing portion through the network so as to manage a content file of each user;

scheduling content files to be registered to the library at a later time; and  
managing the content files to be registered later as well as content files currently stored in the library.

Claim 22 (original): The content managing method as set forth in claim 21,  
wherein the user area for each user is managed so that the user area can be accessed from only the user terminal unit of the user to whom the user area has been assigned, and

wherein a content file stored in the user area is processed corresponding to a command received from the user terminal unit of the user to whom the user area has been assigned.

AN  
Claim 23 (original): The content managing method as set forth in claim 21, wherein the used state of the user area is managed with a database.

Claim 24 (original): The content managing method as set forth in claim 21, wherein the used state of the user area can be displayed by the user terminal unit of the user to whom the user area has been assigned.

Claim 25 (original): The content managing method as set forth in claim 21, wherein content files stored in the library are managed with a database.

Claim 26 (original): The content managing method as set forth in claim 21, wherein content files that are scheduled to be registered later to the library are managed as well as content files currently stored in the library.

Claim 27 (original): The content managing method as set forth in claim 21, wherein a user's delivery request is managed with a database.

Claim 28 (original): The content managing method as set forth in claim 21, wherein a process for purchasing a content file is performed corresponding to a user's delivery request when the content file has been registered to the library; and

wherein a process for purchasing a content file is performed on a scheduled registration date when the content file is scheduled to be registered later.

AM  
Claim 29 (original): The content managing method as set forth in claim 28, wherein the content file purchasing process is performed by copying the content file that the user wants to purchase from the library to the user area for the user.

Claim 30 (original): The content managing method as set forth in claim 21, wherein an automatic delete on / off option can be designated to a content file stored in each user area; and wherein when a new content file is stored to the user area, if the storage capacity of the user area becomes insufficient, a content file designated with the automatic delete on option is deleted from the user area.
